Job Profile	BACKEND DEVELOPER Sign up if you have: ** Inherent excitement to work at a fast-growing company under rapidly changing environments. ** Desire to scale & grow with the company ** Enthusiasm about learning and working with latest technologies in backend

systems

What You'll Do:
** Collaborate with other teams to understand business requirements and design solutions for the same.
** Write clean, maintainable, and efficient code.
** Identify and fix bugs and performance issues.
** Collaborate with the frontend team to design API contracts and integrate with the website.
** Collaborate with the QA Engineers for end-to-end testing of the feature and the system.
** Design and Update testcases of the features and thoroughly test the system.

What we need:
** Basic knowledge of Databases, Python, JavaScript, Computer Networking (RESTful, Sockets etc),Data Structures, and Algorithms. You don't need to mug up SQL and JavaScript syntax, but you are expected to have proactiveness to learn them.
** Knowledge of advanced frameworks like NodeJS, Express, FastAPI is bonus, but not mandatory.
** Willing to get hands dirty with coding and is not hesitant to build applications from scratch.

What you can expect:
** A great work environment with massive ownership and growth opportunities
** Work closely with the founding and the leadership team on key projects
** Opportunity to explore latest tools and technology to get things done.

Our Tech-Stack:
** JavaScript
** Python
** React
** NodeJS, Express, FastAPI
** TypeScript
** MongoDB
** PostgreSQL
** Docker
** Redis
** AWS and GCP services
** Elasticsearch
** Kubernetes

Data Platform Engineer
Sign up if you have:
** Inherent excitement to work at a fast-growing company under rapidly changing environments.
** Desire to scale & grow with the company
** Enthusiasm about learning and working with latest technologies in web development.
** Keen and sharp eye of UI design.

What You'll Do:
** Solely own your product; Build the product from scratch.
** Collaborate with other teams to understand business requirements and design solutions.
** Work on complex architectural problems.
** Have an understanding of loopholes in current system/architecture which can potentially break in future and push towards solving them with other stakeholders.

What we need:
** Should have hands-on experience coding with Python.
** Good knowledge of SQL and NOSQL Database concepts.
** Enthusiastic about building scalable and reliable data pipelines.
** Basic knowledge of data pipeline and workflow management tools like Luigi, Airflow, etc.
** Hands-on experience with Big Data Tools: Hadoop, Kafka/Kinesis, Flume, Scala, etc is an added bonus.

What you can expect:

** A great work environment with massive ownership and growth opportunities
** Work closely with the founding and the leadership team on key projects
** Opportunity to explore latest tools and technology to get things done.
